

SHELBY HARRISON

JUNIOR DEVELOPER

PERSONAL PROFILE

A professional and ambitious Full-Stack, Junior Developer. I have a passion and drive to learn, most recently studied on Manchester Codes Fast Track Software Developer Bootcamp. I am looking for a role that will provide me with an opportunity to display my professional capabilities, and one that will also allow me to progress in my technical capabilities. I work in my spare time to study new languages/tech stacks.

EXPERIENCE

FastTrack Software Developer Bootcamp

Manchester Codes | Feb 2020 - Sept 2020

During my time on the course, I learned and applied in a variety of projects, full stack development skills in Javascript ES6, HTML, CSS & SQL. I also worked with various frameworks and libraries including React, MySQL, Sequelize & Node as well as gaining a good knowledge of Test-Driven Development using Jest & Mocha.

Finance Systems Administrator

myDentist | Aug 2017 - present

Providing overall central administration of the P2P & finance systems ensuring that the business is supported through day to day routines as well as planned and reactive system management. Providing technical support to end users as well as communicating issues, updates and reports to relevant users and stakeholders.

On-Shelf Availability Admin

Co-op | Oct 2015 - Aug 2017

Providing full administrative support to team members ensuring that all systems, processes and procedures are followed in order to reach agreed service levels and support in the delivery of store launches and events. Co-ordinating projects and assigning resources as well as working collaboratively with all internal and external customers and stakeholders on any queries/issues that impact availability.

SKILLS SUMMARY

JavaScript ES6

HTML

CSS

SQL

React

Results Focused

Communication

ACHIEVEMENTS

Heavily worked on the project to upgrade the P2P system which included thoroughly stress testing the new system, working with various consultants and stakeholders to resolve issues and configure, implement & document new features and processes.

PROJECTS

Surreal Estate

<https://focused-ardinghelli-15a5ec.netlify.app>

An estate agent app using React linked to a MongoDB database to view, add and save properties. When deploying a beta launch for this project, I was faced with a CORS error where after some research, I learnt different ways to resolve and now have an understanding of the actual error.

Weather App

<https://shelby568.github.io/weather-app>

A weather app where you can view a 5-day weather forecast wherever in the UK using React and a live weather API.

As my first React project, I initially struggled with understanding props but after a lot of practice and research I am now confident.

Location-Guessr Game

<https://jolly-thompson-e1c518.netlify.app>

A group project where we built our own version of an online game. The location-guessr was created using React & GoogleMaps API. My role for the project was to apply the styling along with the routing & component set ups. One of the issues we faced was how to render the guessing map, after coming up with different methods I then worked through each one and decided the best way.

EDUCATION

Manchester Codes Graduate

FastTrack Software Developer | Feb 2020 - Sept 2020

Codecademy

Online Courses

- JavaScript, React, HTML, CSS

Philips High School

GSCE Grade C

- Maths, English, IT, French & RE

HOBBIES & INTERESTS

As well as improving my languages/tech stack skills, I also love walking my three dogs! I regularly go off-roading and enjoying getting stuck into a good book.
